

MagicSchool Student-Choice AI Partner Project

Piter Garcia

March 26, 2026

Quick Scan

- Grade: Grades 3-5 primary target with K-2 adaptation notes
- Suggested class blocks: Day 3 9:50-10:40 Lamanaco, Day 4 9:50-10:40 Lallucci, Day 5 9:50-10:40 Regelsberger, Day 5 2:15-3:05 Tandoi
- Lesson shape: 3 sessions taught as one project sequence
- Product menu: slideshow, poster or one-pager, booklet, or simple site
- Reference file: magic-school-student-choice-ai-partner-project.bib
- Core idea: AI is a partner for thinking, planning, checking, and revising. AI is not a replacement for student ideas, judgment, or work.

School Planning Goals and Inclusion

- What is expected: Students choose a topic they care about, use MagicSchool to help generate and organize ideas, build a project step by step, and revise their work against a plan.
- What we achieved: This packet turns responsible AI use into an observable classroom routine with clear teacher modeling and visible student checkpoints.
- What needs improvement: After first classroom use, add local student examples and timing notes for each session.
- How to improve: Save one planning sample, one revision sample, and one teacher note about which scaffolds helped most.
- Inclusion focus: Use teacher think-alouds, visual checklists, sentence starters, oral rehearsal, flexible product choices, partner roles, and reduced-text supports so students can participate through multiple entry points.

Learning Targets

- I can choose a topic I care about and explain why it matters to me.
- I can use AI to help me brainstorm and plan without letting AI do my thinking for me.
- I can follow a step-by-step plan to make my project.
- I can check my work, revise it, and explain how AI helped me.

Materials and Setup

- Teacher-managed MagicSchool access on student devices
- Projector for teacher modeling
- Topic-planning sheet or shared digital planning document
- Product tools such as Google Slides, Docs, Sites, or drawing tools
- Printed or projected prompt frames, AI norms, and rubric
- Optional headphones, speech-to-text tools, visual icon supports, and partner checklists

AI Partner Mini-Framework

- Ask: Tell the AI what you want help with.
- Check: Decide if the AI answer is accurate, safe, and useful.
- Choose: Keep only the parts that fit your idea and goal.
- Change: Fix, rewrite, add, or simplify so the work sounds like you.
- Credit/Explain: Be ready to explain how AI helped and what you decided yourself.

AI Use Norms

- Do not type student names, private information, passwords, or personal details into prompts.
- MagicSchool is teacher-managed, and student activity can be monitored by the teacher.
- AI output is a draft or suggestion, not the final answer.
- Students must check every AI suggestion for accuracy, fit, bias, and clarity before using it.
- Students should reject or revise any response that does not match their topic, classroom expectations, or project goal.
- The final project should show student voice, student choices, and student understanding.

Session 1: Brainstorm and Plan

Objective

Students choose a topic of interest, narrow it to a manageable focus, and create a high-level plan for a project using AI as a brainstorming and planning partner.

Mini-Lesson and Modeling

- Teacher introduces the project menu and models how to choose a topic that is exciting, school-appropriate, and not too broad.
- Teacher demonstrates one prompt that asks for topic ideas and one prompt that asks the AI to help narrow a topic.
- Teacher models the difference between using AI for ideas and copying AI language without thinking.
- Teacher posts the Ask, Check, Choose, Change, Credit/Explain routine and refers to it during the demonstration.

Guided Practice

- Students brainstorm 2 to 4 topics independently, with a partner, or by drawing and talking before typing.
- Students try one or two teacher-approved prompt frames in MagicSchool to refine their options.
- Teacher confers quickly to help students pick one topic and one product type.

Work Time

- Students create a high-level plan with a topic, audience, product choice, and 3 to 5 main parts.
- Students record one reason for their choice and one question they still need to answer.
- K-2 or higher-support option: teacher or partner scribes ideas while student points, speaks, or draws.

Closure and Proof of Learning

- Students complete a quick share: My topic is... My product will be... AI helped me by...
- Teacher collects a planning sheet or screenshot as proof.

Session 2: Build Step by Step

Objective

Students use their high-level plan to build their project in manageable steps while checking AI suggestions before applying them.

Mini-Lesson and Modeling

- Teacher models how to turn a big plan into small steps.
- Teacher shows a prompt asking MagicSchool to break a project into student-friendly tasks.
- Teacher models how to compare the AI steps to the student plan and cross out any step that does not fit.

- Teacher explicitly shows how to test one change at a time instead of changing everything at once.

Guided Practice

- Students highlight the first task they will complete today.
- Partners or table groups use a checklist to ask: Does this step match the plan? Is it clear? Is it safe and school-appropriate?
- Teacher pauses the class once for a mid-workshop reset and names common strengths and mistakes.

Work Time

- Students build their chosen product using their own ideas plus selected and checked AI support.
- Students can ask MagicSchool for help with sequencing, sentence starters, headings, design ideas, or next steps.
- Students mark completed steps and note any change they made to the original plan.
- K-2 or higher-support option: use a simplified visual checklist with icons such as plan, make, check, and fix.

Closure and Proof of Learning

- Students show one completed part and explain one AI suggestion they kept, changed, or rejected.
- Teacher captures one observation note, screenshot, or unfinished artifact for progress monitoring.

Session 3: Revise, Validate, and Reflect

Objective

Students finish their project, use AI to check alignment to their original goal, and reflect on how AI supported the process.

Mini-Lesson and Modeling

- Teacher models how to ask MagicSchool to review a project for clarity, completeness, and connection to the student's goal.
- Teacher shows how to compare AI feedback to the student's own rubric and planning sheet.
- Teacher models rejecting feedback that changes the student's voice or adds inaccurate information.

Guided Practice

- Students use a revision checklist to compare the project to their original plan.
- Partners complete a short peer check: What is clear? What is missing? What still sounds like the student?
- Teacher conferences with students who need help deciding which revisions matter most.

Work Time

- Students revise the final product and prepare a short explanation of how they used AI responsibly.
- Students complete a reflection naming one thing AI helped with, one thing they decided on their own, and one change they made after checking.
- K-2 or higher-support option: use oral reflection with sentence frames or picture choices.

Closure and Proof of Learning

- Students share the finished product or one finished section.
- Teacher collects the final product plus a reflection, conference note, or audio explanation.

Teacher Modeling Prompts

- I am an elementary student choosing a project topic. Give me four school-appropriate topic ideas connected to things kids care about.
- My topic is _____. Help me narrow it to one manageable project idea for a slideshow, poster, booklet, or simple site.
- I chose _____ as my topic and _____ as my product. Help me make a simple plan with an introduction, three main parts, and a closing.
- Break this project plan into short student-friendly steps I can follow one at a time.
- Check whether this project matches my goal and suggest revisions without changing my voice.
- Help me explain how AI supported my project, but keep the explanation in words a child would use.

Student Prompt Starters

- I want to make a project about...
- Help me choose between these topics...
- Give me simple steps for making a...
- Which ideas here do not match my goal...
- Help me check if my project is clear and complete...
- Tell me what I should double-check before I say I am done...

Assessment and Proof

- Student decision-making stays visible through topic choice, planning notes, and revision choices.
- Teacher looks for evidence that students checked AI output instead of accepting it automatically.
- Final products should align to the student’s stated goal and chosen format.
- Independence can look different by learner: independent typing, partner-supported planning, oral rehearsal, drawing first, or teacher-supported dictation all count when the student still owns the ideas.
- Evidence may include planning sheets, screenshots, checklists, product drafts, final products, reflections, or teacher conference notes.

Rubric

Category	Beginning	Developing	Meeting
Topic ownership and idea clarity	K-2: Needs help choosing a topic or explaining the idea. 3-5: Topic is too broad, unclear, or mostly chosen by others.	K-2: Chooses a topic with support and can say a little about it. 3-5: Chooses a topic and gives a basic reason, but focus may still be broad.	K-2: Chooses a clear topic and explains why it matters. 3-5: Chooses a focused topic, explains the goal clearly, and keeps ownership of the idea.
Planning with AI	K-2: Uses AI only with heavy support and does not yet connect the response to a plan. 3-5: Prompts are incomplete or the plan mostly repeats AI output without student decisions.	K-2: Uses AI with support to make a simple plan. 3-5: Uses AI to help plan and makes some choices, but the plan still needs teacher help or clearer structure.	K-2: Uses AI support to help make a simple plan the student understands. 3-5: Uses AI to brainstorm and organize a plan while keeping student ideas and making clear choices.
Step-by-step execution	K-2: Needs frequent adult help to begin or continue making the product. 3-5: Has difficulty following the plan or completing steps in order.	K-2: Completes parts of the project with prompts and reminders. 3-5: Follows some steps and completes parts of the project, but may skip or confuse parts.	K-2: Completes the product with supports and can show the main parts. 3-5: Follows a step-by-step plan, builds the product steadily, and adjusts when needed.
Revision and validation	K-2: Needs help noticing what to fix. 3-5: Makes few revisions and does not yet compare the project to the goal or plan.	K-2: Can fix one or two parts after support. 3-5: Revises some parts after feedback, but checking is inconsistent or surface-level.	K-2: Uses support to check and improve the project. 3-5: Uses the plan, rubric, peer feedback, and AI feedback to revise purposefully and improve quality.

Category	Beginning	Developing	Meeting
Responsible and safe AI use	K-2: Needs repeated reminders not to share private information and not to copy everything from AI. 3-5: Uses AI unsafely or accepts responses without checking.	K-2: Follows safety rules with reminders. 3-5: Usually follows safety rules and checks some responses, but may still overtrust AI.	K-2: Uses AI safely with teacher support and can say one rule. 3-5: Uses AI safely, checks responses for fit and accuracy, and explains what the student decided independently.
Communication of final product	K-2: Product is incomplete or hard to understand without adult explanation. 3-5: Product communicates some ideas but lacks clarity, organization, or audience awareness.	K-2: Product shares the main idea with some support. 3-5: Product communicates the topic clearly in parts, but details, structure, or explanation need strengthening.	K-2: Product clearly shares the topic and key ideas in an accessible way. 3-5: Product is clear, organized, and understandable for the intended audience, and the student can explain the work.

Inclusive Strategies and Practices

- Pre-teach the project choices with visuals and examples before students open devices.
- Offer multiple ways to generate ideas: draw, speak, sort picture cards, dictate, type, or talk with a partner.
- Use predictable partner roles so one student does not take over the device.
- Keep text load manageable with sentence starters, highlighted keywords, and model responses.
- Allow students to show understanding through audio explanation, teacher scribing, captions, labels, or short oral presentations.
- Provide extension by asking advanced students to compare two AI suggestions, justify a revision choice, or improve for a specific audience.
