

Foundational Coding and Directional Loops

Plan. Code. Debug.

**Use code steps to
make something
happen on purpose.**

1

Plan it

2

Code it

3

Debug it

Today's Mission

Our focus

Directional sequencing, early loops, and physical-to-digital coding transfer

- ▶ Students produce a visible action, artifact, or explanation tied
- ▶ Teacher records one note, screenshot, or observation that can
- ▶ The packet keeps links to both the evidence summary

Grade 1

Use code steps to make something happen on purpose.

Keep the next step visible and keep trying.

How We Will Move Through It

What to keep in front of you

- ▶ Open with a short model that names the lesson focus: directional
- ▶ Keep one visible success criterion or checklist posted during work time.
- ▶ Build in one stop-and-check moment for debugging, peer talk, or reset.

If You Get Stuck

Use this help ladder

1. Look at the slide.
2. Try one small step.
3. Ask your partner.
4. Ask one clear question.

If directions feel tricky,
check the example.

Look for the success
check on the slide.

Debugging is part
of the learning.

Show What You Learned

Students produce a visible action, artifact, or explanation tied

Teacher records one note, screenshot, or observation that can

The packet keeps links to both the evidence summary

Finish strong

Save it, share it, explain it, or demonstrate it.
