

Tinkercad Design and Revision

Design. Build. Improve.

Design a solution, build it, and improve it.

1

Imagine it

2

Build it

3

Improve it

Today's Mission

Our focus

3D design, iteration, and design-justification workflows

- ▶ Students produce a visible action, artifact, or explanation tied
- ▶ Teacher records one note, screenshot, or observation that can
- ▶ The packet keeps links to both the evidence summary

Grade 5

Design a solution, build it, and improve it.

Keep the next step visible and keep trying.

How We Will Move Through It

What to keep in front of you

- ▶ Open with a short model that names the lesson focus: 3D
- ▶ Keep one visible success criterion or checklist posted during work time.
- ▶ Build in one stop-and-check moment for debugging, peer talk, or reset.

If You Get Stuck

Use this help ladder

1. Look at the slide.
2. Try one small step.
3. Ask your partner.
4. Ask one clear question.

If directions feel tricky,
check the example.

Look for the success
check on the slide.

Testing helps us improve
instead of guess.

Show What You Learned

Students produce a visible action, artifact, or explanation tied

Teacher records one note, screenshot, or observation that can

The packet keeps links to both the evidence summary

Finish strong

Save it, share it, explain it, or demonstrate it.
