

LEGO Game and Conflict Resolution

Piter Garcia

March 20, 2026

Packet Use

This printable lesson packet is generated from the paired Markdown guide. The Markdown version remains the clickable, neurodivergent-friendly working copy; this PDF carries the same lesson substance in a formal handout format. Evidence claims in this packet are based on transcript-derived lesson notes and the cleaned transcript files in this workspace.

Quick Scan

- **Grade:** Grade 1
- **Grade Hub:** Notes [../grade-1-Notes.md]
- **Schedule Reference:** Spring2026_TeachingSchedule_Derek.md [../school/Spring2026_TeachingSchedule_Ignite/grade-1/Spring2026_TeachingSchedule_Derek.md]
- **Workbook Sheet:** 1st in Teaching_Placement-IGNITE Curriculum_ GCSD25-26.xlsx
- **Lesson Focus:** A structured build or game task used to teach teamwork, turn-taking, and reflective problem solving while students work with shared materials.
- **CS Alignment Strength:** Inclusive computing culture / collaboration support lesson
- **LaTeX Source:** lego-game-and-conflict-resolution.tex [./lego-game-and-conflict-resolution.tex]
- **Bib File:** lego-game-and-conflict-resolution.bib [./lego-game-and-conflict-resolution.bib]
- **Artifacts Folder:** artifacts/ [./artifacts/]

Lesson Identity

- **Likely Class Blocks:** Day 3 – 12:25-1:15 – Gargana, Day 3 – 2:15-3:05 – Polfleit, Day 5 – 12:25-1:15 – Montgomery
- **Main Lesson Family:** LEGO Game and Conflict Resolution
- **Primary Evidence Base:** Transcript-derived notes plus source transcripts from this teaching-placement workspace.
- **Primary External Source Type:** Official curriculum/provider materials.

What We Are Teaching

- following shared task rules in a maker or game environment
- using language to repair conflict during a collaborative build
- breaking a challenge into steps and returning to the goal after a disruption
- treating classroom materials as shared computing/maker resources

CS Standards Alignment

- **1A-IC-17:** Work respectfully and responsibly with others when using technology or shared materials. Why it fits here: The core learning outcome is collaborative responsibility and respectful participation.
- **1A-AP-08:** Model daily processes by creating and following algorithms. Why it fits here: Students use rule-based sequences to complete the game or build task.
- **1A-AP-11:** Decompose the steps needed to solve a problem into a precise sequence of instructions. Why it fits here: Teacher mediation helps students return to the task sequence after conflict.

NYS / Local Curriculum Alignment

- Aligned to the local first-grade IGNITE sequence as a readiness lesson for collaborative computing and maker-space participation.
- Supports New York-facing SEL and classroom technology participation goals through shared problem solving and material care.
- This lesson is not programming-heavy; its main CS value is building the classroom culture required for later successful computing tasks.

Lesson Content and Concepts

- rules
- sequence
- shared resources
- problem solving
- collaboration

Evidence / Proof of Instruction

- **Transcript-derived note:** 260211 Grade 1 Gargana Lego Conflict [../transcript-derived-lessons/260211-grade-1-gargana-lego-conflict.md] The lesson note identifies the class as a LEGO/game context where conflict resolution and task continuation were central.
- **Source transcript:** 260211 Grade 1 Gargana Lego Conflict [../transcripts/260211-grade-1-gargana-lego-conflict.md] The source transcript records redirection, peer conflict management, and attempts to keep the class oriented toward the shared activity.
- **Observed teacher moves:** The evidence of instruction comes from norms-setting, conflict mediation, and returning students to the step-by-step activity instead of abandoning the task.
- **Likely student proof:** Students completing the game/build, using calmer language, and maintaining access to shared materials are classroom evidence that the lesson landed.

Assessment Evidence

- Student stays in the task routine after a conflict or correction.
- Student can name a rule or repair move that helps the group continue.
- Student completes their part of the shared game/build structure.

UDL and Inclusion Supports

Multiple Representation

- Keep rules visible with icons and one-sentence language.
- Model one repair phrase and one help phrase.
- Use floor/table examples to show what “ready to build” looks like.

Multiple Action / Expression

- Allow students to point to a rule card instead of speaking immediately.
- Provide assigned jobs so each student has a clear role.
- Use quick reset spaces or pause cards for students who become dysregulated.

Multiple Engagement

- Make the goal concrete and shared so students see why cooperation matters.
- Use frequent praise for repair, not only for the final product.
- Keep the task hands-on and short-cycle.

How We Are Already Making It Inclusive

- The transcript evidence suggests active teacher repair language and behavioral coaching were already built into the lesson.
- The task uses tactile materials, which can help students stay engaged while practicing norms.
- Collaborative play created a natural context for teaching shared-resource expectations.

How to Improve Inclusion Next Time

- Add explicit visual sentence stems for conflict repair.
- Record which roles consistently trigger conflict and redesign those role expectations.
- Prepare a calmer “restart routine” so students can rejoin without shame.
- Add a teacher observation checklist to **artifacts/** for documenting collaboration growth.

Materials and Setup

- LEGO or maker materials
- Game/build prompt
- Visible rule cards
- Teacher observation sheet

Teacher Moves / Script / Routines

- Preview one rule, one role, and one repair phrase before materials go out.
- Interrupt quickly when conflict threatens access to the task.
- Narrate successful repair as evidence of learning, not just behavior compliance.
- Close with a short reflection on how the group kept the activity going.

Common Errors and Debugging

- Students may focus on winning or building faster than working together.
- Conflict can erase the instructional goal if there is no visible restart routine.
- Some students may need explicit language frames to re-enter the activity.

Extensions and Simplifications

- Extension: have students help generate the next version of the class build rules.
- Simplification: reduce the number of shared parts and shorten the task cycle.
- Extension: compare what makes a build/game rule effective versus confusing.

Related Local Materials

- No direct local lesson packet linked yet.

Artifacts Checklist

- Compiled lesson PDF in **artifacts/**
- At least one screenshot, student example, or setup photo
- One short assessment or observation record
- Updated standards/source bibliography once the **.bib** file is revised
- Any teacher reflection or revision notes after reteaching
