

Teaching Indi — to Turn

Code. Test. Drive.

**Code a robot, test it,
and make it work better.**

1

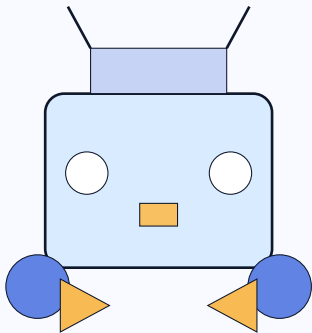

Code it

2

Test it

3

Tune it

Today's Mission

Our focus

Use code to move and control a robot.

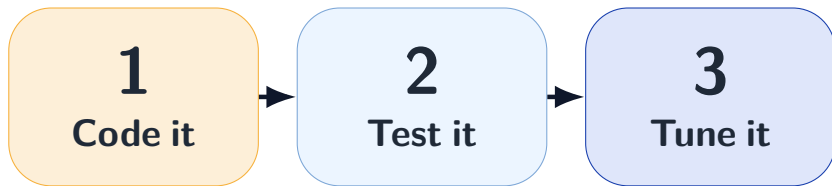

- ▶ Student completes the core task or an accessible version
- ▶ Student can explain at least one step, pattern, choice,
- ▶ Teacher captures one proof item: screenshot, observation note, exit

Kindergarten

Code a robot,
test it, and make
it work better.

Keep the next
step visible and
keep trying.

How We Will Move Through It

What to keep in front of you

- ▶ Model the first step before independent or partner work starts.
- ▶ Keep one visible checklist, anchor chart, or projected example available throughout
- ▶ Pause once mid-lesson for a quick debug, reflection, or reset point.

If You Get Stuck

Use this help ladder

1. Look at the slide.
2. Try one small step.
3. Ask your partner.
4. Ask one clear question.

Device-to-robot pairing
and setup can split
attention quickly.

One partner may take
over unless roles are
named and revisited.

Students may change
too many variables at
once and lose track

Show What You Learned

Student completes the core task or an accessible version

Student can explain at least one step, pattern, choice,

Teacher captures one proof item: screenshot, observation note, exit

Finish strong

Save it, share it, explain it, or demonstrate it.
