

Robot Logic and Conditional Coding

Piter Garcia

March 20, 2026

Grade and Class Match

Grade: Grade 5

Likely blocks: Day 2 · 10:45-11:35 · Pickett; Day 3 · 10:45-11:35 · McGlashon; Day 5 · 10:45-11:35 · Pecora

Lesson Focus

Conditional logic, event-based behavior, and partner debugging in robotics.

Learning Targets

- Students use conditional or event-based structures in robot code.
- Students explain how a program changes based on the condition or trigger.
- Students debug a challenge with a partner.

Materials

- Robots
- Student devices
- Challenge instructions

Suggested Lesson Flow

1. Open with the exact device, tool, or routine students need in order to start successfully.
2. Model one example task before students begin independent or partner work.
3. Give students time to build, code, design, or document their work while circulating for support.
4. Close with a short share-out, reflection, or debugging discussion.
