

What your presentation shows

SAY

Today I'll show you how to read this rubric before you work.

Your job is to explain one assigned marketing function. I'm listening for three things: its purpose, its connection to the marketing concept, and a specific business action.

DO POINT to each numbered line. Define “purpose” as what the function does. Scan left, center, right.

A 3 is the target

SAY

A 3 means proficient. That is the expected target.

If you accurately explain the purpose, connect it to a customer need or want and a business goal, and give a specific example, you have shown the core learning.

A 4 shows deeper thinking, like connecting another function or applying your idea in a new situation. It is not about extra slides.

DO PAUSE. Ask: “What makes a 4 different?” Take one response. Confirm: deeper thinking, not length.

If the evidence is still growing

SAY

At 2, part of the explanation is there, but a required connection or example still needs work.

At 1, you have started and need help making the understanding visible.

These levels tell us what to work on next. They do not label you as a person.

DO KEEP this brief. Point at 2, then 1. Do not ask students to disclose grades.

What a proficient answer sounds like

SAY

Look at grocery pickup. Which function does it show? [Pause.] Channel Management.

Purpose: how customers receive groceries. What customer want? [Pause.] Convenience.

How could pickup support the store? Sales and profit.

Specific action: order online; a worker brings groceries to the pickup spot. Hear the purpose, concept link, and example?

DO 10-second THINK pause. Invite two different students. Stand still and scan while listening. Let students answer before you say each term.

Supports help you show what you know

SAY

You can use notes, cue cards, vocabulary, rehearsal, and a visual that helps us understand.

Those supports do not lower the content target. We still need to hear the purpose, concept link, and example.

Before you start work, write those three headings for your assigned function. Which one do you need help with first?

DO POINT to three targets. Take one question, then transition to work time. Do not promise a slide count or final grading formula.
