

CPAST Three-Way Conference Prep Packet

Pine Brook Elementary — Spring 2026

Purpose: Help Piter walk into the CPAST meeting ready with the right evidence, talking points, and clickable backup documents.

1 What The Meeting Is

This is your **final three-way conference**. Based on your placement documents, the meeting is meant to:

- review your teaching using the CPAST rubric,
- compare **your self-assessment**, **Derek's assessment**, and **Zenon's assessment**,
- discuss evidence behind ratings,
- work toward **consensus scores**, and
- identify **growth goals** for your next stage as a teacher.

Bottom line: it is conversational, but it is also an evidence-based evaluation meeting. Walk in ready to talk through examples, not just impressions.

2 What To Bring Or Have Open

- Your CPAST self-assessment notes
- 2-4 strong lesson examples that show planning, inclusion, assessment, and adjustment
- A few concrete artifacts: lesson plans, student-facing slides, reflections, screenshots, or de-identified student work
- One short summary of your growth this semester
- One short summary of what you still want to improve

2.1 Best Clickable References

Need	Open This
CPAST rubric	Warner School CPAST rubric
Examples of evidence	Warner CPAST examples of evidence
Field experience evaluation context	Field experience evaluation
Placement expectations	Letter of Expectations work file
Main action checklist	Action items
Internship summary	Student teaching internship action items and key information
Placement handbook notes	Handbook notes
School schedule / milestones	Spring 2026 teaching schedule
Lesson hub	Lessons notes
Transcript hub	Transcripts notes

3 What They Are Likely Evaluating

Your own documents repeatedly point to these evidence areas:

- planning and alignment,
- inclusive instruction and differentiation,
- formative assessment and instructional adjustment,
- use of digital tools in CS learning,
- reflective practice and professional behavior.

3.1 Fast Evidence Checklist

- **Planning:** a lesson with clear targets, sequence, materials, and assessment
- **Inclusion:** a lesson where scaffolds, visuals, chunking, or accommodations are visible
- **Adjustment:** an example of how you changed instruction based on what students needed
- **Technology/CS:** a lesson where digital tools actually supported the learning goal
- **Reflection:** a short example of what you learned and what you changed next
- **Professionalism:** consistent attendance, communication, deadlines, and responsiveness to feedback

4 How To Talk In The Meeting

4.1 Good Opening

I see this semester as growth in planning, inclusive support, and making CS learning more visible and accessible for students. I came in with one level of readiness, and I can now point to specific lessons and feedback that show how my teaching changed.

4.2 Three Strong Themes To Be Ready To Explain

1. **How your planning improved.** Mention clearer targets, stronger sequencing, stronger lesson materials, or tighter alignment.
2. **How you supported access and inclusion.** Mention chunking, visuals, partner structures, scaffolds, or class-specific supports.
3. **How you responded to evidence.** Mention formative checks, confusion you noticed, and what you adjusted.

4.3 Good Reflection Formula

Use this pattern when answering questions:

What I was trying to teach → what I noticed → what I changed or would change next

5 Suggested Lesson Evidence To Pull Up

Use 2–4 lessons, not everything. Pick ones that let you talk about different strengths.

Theme	Good Place To Look
Inclusive scaffolding	Grade-specific lesson folders under Lessons notes
Audience/class support needs	Class audience profiles inside each grade folder, starting from Lessons notes
Transcript-backed evidence	Transcripts notes
School expectations / curriculum spine	IGNITE curriculum notes
Schedule / chronology	Spring 2026 teaching schedule

6 Questions They May Ask

- Where do you see the most growth in your teaching this semester?
- How did you differentiate or make lessons more accessible?
- What evidence do you have that students understood the lesson?
- How did you adjust when something was not working?
- What area do you still want to strengthen?

6.1 Strong Answer Strategy

- answer briefly first,
- name one real lesson or class context,
- point to one concrete artifact if needed,
- end with what you learned or what you would improve.

7 What To Avoid

- Do not answer only in vague generalities.
- Do not bring too many examples; bring a small strong set.
- Do not treat the meeting like it is only about scores.
- Do not hide growth areas; name them clearly and pair them with a next step.

8 Five-Minute Prep Before The Meeting

1. Open the CPAST rubric.
2. Open 2–4 lesson folders you may cite.
3. Open one transcript or evidence note if a lesson needs backup.
4. Write 3 bullets:
 - biggest growth,

- strongest evidence,
- next growth goal.

5. Keep this PDF open as your talking guide.
