

Lesson 2-3: Build, Check, Finish

Today we wrap up the AI project in 4 steps.

Big idea

AI can help us finish, but we make the choices.

Today You Need

By the end, you should have:

- ▶ a topic
- ▶ 3 project parts or slides
- ▶ one AI check
- ▶ one final reflection

Build first. Check second. Finish third.

Step 1: Recover

If you already have a topic and guide

Go straight to Step 2.

If you are missing your guide

Copy My topic is _____. Help me make a simple project guide with 3 parts. Each part should be short and connected to computer science.

Step 2: Build One Slide

Use this for each part

Copy My topic is _____. Part __ of my guide is _____.
Give me 3 short bullet notes I can use on one slide.
Keep it clear for Grade 4.

Build rule

Use the notes to make your own slide. Do not paste everything without reading.

Simple Example

Topic and guide

Topic: robots help animals

Part 1: what robots are

Part 2: how robots help

Part 3: why it matters

One slide

Title: How robots help

Robots can use sensors.

Robots can follow code.

Robots can do jobs safely.

Step 3: Check Your Project

Use this after you build

Copy My topic is _____. My guide is _____. Here is my project text: _____. Tell me what matches, what is missing, and what I should fix first.

Check rule

Fix one thing first. Keep it simple.

Step 4: Finish

Add your final reflection

Copy Help me write a short final reflection. I used AI to _____. I made my own choices by _____. Keep it 2 sentences.

Finish rule

Your reflection should sound like you.

Before You Turn It In

Final checklist

- ▶ My topic is clear.
- ▶ I have 3 parts or slides.
- ▶ I checked my project with AI.
- ▶ I fixed one thing.
- ▶ I wrote my reflection.

Exit Ticket

Answer before you leave

- ▶ What did you finish?
- ▶ What did AI help with?
- ▶ What did you decide yourself?
- ▶ What would you improve next time?

Save your work before you close your Chromebook.
