School Planning Goals and Inclusion

- What is expected: - I can predict outcomes of the changes in energy that occur when objects collide. | - I can observe and describe the relationship between energy and force. | - I can engage effectively in a range of collaborative discussions. | - Modify, remix, or incorporate portions of an existing program into one's own work, to develop something new or add more advanced features. | - Use evidence to construct an explanation relating the speed of an object to the energy of that object. | - Students build knowledge by actively exploring real-world issues and problems, developing ideas and theories, and pursuing answers and solutions.
- What we achieved: No direct transcript match is attached yet. Treat this lesson as workbook-backed and enrich it when a matching classroom transcript is available.
- What needs improvement: stronger proof, cleaner assessment notes, and tighter lesson artifacts.
- How to improve: add transcript proof, one saved artifact, and clearer success criteria.
- Inclusion focus: use visual modeling, chunked directions, predictable routines, and flexible participation roles.
