

Build Shapes with Builderz

Create. Compare. Reflect.

Use digital tools to build precise shapes and talk about how technology helps us create.

Today's Learning Goal

I can statement

I can use Builderz to make shapes and explain how a digital tool helps me create more carefully.

- ▶ I can build a circle and other simple shapes.
- ▶ I can compare making shapes by hand and on a Chromebook.
- ▶ I can explain one thing I noticed about accuracy or ease.

Success Looks Like

A shape built with intention and a short explanation of the process.

Trying, revising, and sharing all count as learning.

Application Activity

Teacher model

Open `drawings.new`, try the Pen tool to make a circle, then wonder aloud whether the circle shape tool might help us draw a more perfect shape.

1. Students open `drawings.new`.
2. Students experiment with Builderz or the drawing tools to create a perfect circle.
3. Students keep building with other simple shapes if they finish early.
4. Teacher sets a visible timer and encourages revision.

Teacher language

“Your job is not to be fast. Your job is to test tools, notice what happens, and improve your shape.”

Build Shapes Challenge

- ▶ First, make one circle you are proud of.
- ▶ Next, build two more perfect shapes.
- ▶ Then, combine shapes to make a picture, design, or object.
- ▶ Save your work so you can talk about one smart choice you made.

Inclusion and Support Moves

- ▶ Model each step visually before students begin.
- ▶ Keep directions chunked: open, choose a tool, make one shape, revise.
- ▶ Offer flexible participation: mouse, trackpad, touchpad helper, or verbal coach.
- ▶ Pair students strategically so talk supports problem solving.
- ▶ Provide sentence frames such as “I used ___ because ____.” and “This tool helped me make a more ___ shape.”
- ▶ Celebrate revision, not just neat final products.

Accessibility reminder

Students may demonstrate understanding by showing the shape, explaining their process aloud, or comparing hand-drawn and digital work.

CS Standards Connection

Aligned CSTA K–2 ideas

- ▶ **1A-AP-08:** Model daily processes by creating and following steps to complete a task.
- ▶ **1A-AP-12:** Develop plans that describe a program's sequence of events, goals, and outcomes.
- ▶ **1A-IC-17:** Work respectfully and responsibly with others when using computing technologies.

How this lesson supports the standards

Students follow a sequence to open a tool, choose features, create shapes, revise their work, and discuss how digital tools change the outcome.

Closure: Group Share

Discussion prompts

- ▶ Were you able to draw a circle using your Chromebook?
- ▶ What did you like about drawing a circle with pencil and paper?
- ▶ What did you like about drawing a circle with your Chromebook?

By Hand	Digital
What felt good?	What helped?

Teacher move

Record ideas on a t-chart or Venn diagram to help students compare both experiences.

Extension and Spaced Practice

- ▶ Show students simple pictures made from circles, squares, triangles, and rectangles.
- ▶ Ask them to recreate the image by hand and then with Builderz or Google Drawings shape tools.
- ▶ Invite reflection: What felt easier by hand? What felt easier with technology?
- ▶ Revisit shape-building during center time, morning work, or art integration to strengthen retention.

Exit idea

“One way technology helped me today was _____. One way I still want to improve is _____.”
