

Sculpting Your First Circuit

Today we will learn, build, test, and show our thinking.

Grade 3 learners: big steps, clear checks, and one thing at a time.

Today's Goal

- ▶ I can build a simple circuit.
- ▶ I can understand what a circuit is.
- ▶ I can explain how a simple circuit works.

Remember

We do not have to be perfect right away. We take one step, then the next step, then we check.

What You Need

- ▶ Your class materials
- ▶ The digital tool or build materials for today
- ▶ A partner voice and your thinking

Partner Norms

Look. Listen. Try. Talk. Help without taking over.

Step 1

Watch the model and name the goal.

Watch the model and name the goal.

- ▶ Use the slide to track what we are doing first.
- ▶ Name the goal in student language before materials or devices create extra noise.

Pause. Check. Then move on.

Step 2

Try the task in small parts.

Try the task in small parts.

- ▶ Pause at each checkpoint before moving on.
- ▶ Keep one visible checklist or example on screen during work time.

Pause. Check. Then move on.

Step 3

Check your work and explain your thinking.

Check your work and explain your thinking.

- ▶ Use the help routine if something still feels unclear.
- ▶ Pause once to help students reflect and reset before the final task push.

Pause. Check. Then move on.

If You Get Stuck

1. Read the directions on your screen or slide one more time.
2. Check the example, the checklist, or your partner role.
3. Try one small change before asking for a full rescue.
4. Students may lose the main goal if the task has too many moving parts.

Help Routine

Stop. Breathe. Point to where you are stuck. Ask a specific question.

Show Your Learning

- ▶ I stayed with the steps and used the help routine when I needed it.
- ▶ I made, coded, explained, or revised something that matches the lesson goal.
- ▶ I can point to one choice, fix, or idea I learned today.

Before You Leave

Save it, share it, explain it, or demonstrate it.

Teacher Voiceover Cues

- ▶ Today we are working on sculpting your first circuit. Watch first, then try it with me.
- ▶ If you feel stuck, stop at the checkpoint slide and use the help routine before you panic.
- ▶ Show what you learned by saving, sharing, explaining, or demonstrating one clear success move.

This slide can be removed before student use if you only want the visual deck.
