

Squishy Circuits Projects

Today we will learn, build, test, and show our thinking.

Grade 3 learners: big steps, clear checks, and one thing at a time.

Today's Goal

- ▶ I can define the basic components of a simple circuit
- ▶ I can understand the difference between conductive and insulating materials
- ▶ I can construct a simple circuit project using squishy dough to light an LED.

Remember

We do not have to be perfect right away. We take one step, then the next step, then we check.

What You Need

- ▶ Your class materials
- ▶ The digital tool or build materials for today
- ▶ A partner voice and your thinking

Partner Norms

Look. Listen. Try. Talk. Help without taking over.

Step 1

Read today's goal and make a simple plan.

Read today's goal and make a simple plan.

- ▶ Decide what you will finish first, next, and last.
- ▶ Name the goal in student language before materials or devices create extra noise.

Pause. Check. Then move on.

Step 2

Work through your checklist and pause for help when needed.

Work through your checklist and pause for help when needed.

- ▶ Do not wait until the end to ask if you are stuck.
- ▶ Keep one visible checklist or example on screen during work time.

Pause. Check. Then move on.

Step 3

Share, reflect, or present your progress.

Share, reflect, or present your progress.

- ▶ Be ready to explain one choice you made and why.
- ▶ Pause once to help students reflect and reset before the final task push.

Pause. Check. Then move on.

If You Get Stuck

1. Read the directions on your screen or slide one more time.
2. Check the example, the checklist, or your partner role.
3. Try one small change before asking for a full rescue.
4. Students may lose the main goal if the task has too many moving parts.

Help Routine

Stop. Breathe. Point to where you are stuck. Ask a specific question.

Show Your Learning

- ▶ I stayed with the steps and used the help routine when I needed it.
- ▶ I made, coded, explained, or revised something that matches the lesson goal.
- ▶ I can point to one choice, fix, or idea I learned today.

Before You Leave

Save it, share it, explain it, or demonstrate it.

Teacher Voiceover Cues

- ▶ Today we are working on squishy circuits projects. Watch first, then try it with me.
- ▶ If you feel stuck, stop at the checkpoint slide and use the help routine before you panic.
- ▶ Show what you learned by saving, sharing, explaining, or demonstrating one clear success move.

This slide can be removed before student use if you only want the visual deck.
