

Magic School — Day 2

Today we will learn, build, test, and show our thinking.

Grade 4 learners: big steps, clear checks, and one thing at a time.

Today's Goal

- ▶ I can explain what MagicSchool is and why it's useful for learning.
- ▶ I can log into MagicSchool and find my way around the main areas.
- ▶ I can name at least three different types of activities available on MagicSchool.

Remember

We do not have to be perfect right away. We take one step, then the next step, then we check.

What You Need

- ▶ Your class materials
- ▶ The digital tool or build materials for today
- ▶ A partner voice and your thinking

Partner Norms

Look. Listen. Try. Talk. Help without taking over.

Step 1

Open the tool and follow the model slide.

Open the tool and follow the model slide.

- ▶ Stay on the same screen as the class until the first example is complete.
- ▶ Model the first screen and the exact tool students must use before release.

Pause. Check. Then move on.

Step 2

Create your own content with the target feature.

Create your own content with the target feature.

- ▶ Use the checklist so you know what must be included.
- ▶ Provide a visible checklist so students know what counts as complete.

Pause. Check. Then move on.

Step 3

Revise, save, and prepare to share.

Revise, save, and prepare to share.

- ▶ Check that your work matches the success criteria before you turn it in.
- ▶ Use sentence frames or model examples when students need help generating content, not just clicking tools.

Pause. Check. Then move on.

If You Get Stuck

1. Read the directions on your screen or slide one more time.
2. Check the example, the checklist, or your partner role.
3. Try one small change before asking for a full rescue.
4. Tool navigation can overshadow the content goal if too many options appear at once.

Help Routine

Stop. Breathe. Point to where you are stuck. Ask a specific question.

Show Your Learning

- ▶ I stayed with the steps and used the help routine when I needed it.
- ▶ I made, coded, explained, or revised something that matches the lesson goal.
- ▶ I can point to one choice, fix, or idea I learned today.

Before You Leave

Save it, share it, explain it, or demonstrate it.

Teacher Voiceover Cues

- ▶ Today we are working on magic school — day 2. Watch first, then try it with me.
- ▶ If you feel stuck, stop at the checkpoint slide and use the help routine before you panic.
- ▶ Show what you learned by saving, sharing, explaining, or demonstrating one clear success move.

This slide can be removed before student use if you only want the visual deck.
