

Minecraft Coding Fundamentals

Today we will learn, build, test, and show our thinking.

Grade 4 learners: big steps, clear checks, and one thing at a time.

Today's Goal

- ▶ I can follow the lesson steps and stay with the class routine.
- ▶ I can try, test, and improve my work.
- ▶ I can show one piece of evidence that I learned something new.

Remember

We do not have to be perfect right away. We take one step, then the next step, then we check.

What You Need

- ▶ Your class materials
- ▶ The digital tool or build materials for today
- ▶ A partner voice and your thinking

Partner Norms

Look. Listen. Try. Talk. Help without taking over.

Step 1

Open Minecraft Education and get to the correct world.

Open Minecraft Education and get to the correct world.

- ▶ Use the click-path on the slide. If login breaks, pause and use the help routine.
- ▶ Project the exact click path before students begin so setup friction does not consume the lesson.

Pause. Check. Then move on.

Step 2

Read the challenge and build your code a little at a time.

Read the challenge and build your code a little at a time.

- ▶ Test after small changes so you can see what worked.
- ▶ Use a stop-and-check slide after world entry so students confirm they are in the correct place before coding.

Pause. Check. Then move on.

Step 3

Debug with a partner and improve your solution.

Debug with a partner and improve your solution.

- ▶ Say what changed, why you changed it, and what happened next.
- ▶ Require test-after-each-change routines so debugging stays visible and manageable.

Pause. Check. Then move on.

If You Get Stuck

1. Read the directions on your screen or slide one more time.
2. Check the example, the checklist, or your partner role.
3. Try one small change before asking for a full rescue.
4. Sign-in or menu navigation can block learning before coding even starts.

Help Routine

Stop. Breathe. Point to where you are stuck. Ask a specific question.

Show Your Learning

- ▶ I stayed with the steps and used the help routine when I needed it.
- ▶ I made, coded, explained, or revised something that matches the lesson goal.
- ▶ I can point to one choice, fix, or idea I learned today.

Before You Leave

Save it, share it, explain it, or demonstrate it.

Teacher Voiceover Cues

- ▶ Today we are working on minecraft coding fundamentals. Watch first, then try it with me.
- ▶ If you feel stuck, stop at the checkpoint slide and use the help routine before you panic.
- ▶ Show what you learned by saving, sharing, explaining, or demonstrating one clear success move.

This slide can be removed before student use if you only want the visual deck.
