

Tech Opens A World of Communication

Today we will learn, build, test, and show our thinking.

Kindergarten learners: big steps, clear checks, and one thing at a time.

Today's Goal

- ▶ I can discuss how people communicate with and without technology (K-1.IC.1)
- ▶ I can explain the “rules” that help people share information over long distances (K-1.NSD.4)
- ▶ I can use SeeSaw to share what I learned with others (K-1.DL.2)

Remember

We do not have to be perfect right away. We take one step, then the next step, then we check.

What You Need

- ▶ Your class materials
- ▶ The digital tool or build materials for today
- ▶ A partner voice and your thinking

Partner Norms

Look. Listen. Try. Talk. Help without taking over.

Step 1

Listen for the key idea and connect it to real life.

Listen for the key idea and connect it to real life.

- ▶ Use the icon or example on the slide to anchor your thinking.
- ▶ Anchor the abstract idea in a concrete example from school or home technology use.

Pause. Check. Then move on.

Step 2

Try the guided practice with a partner or group.

Try the guided practice with a partner or group.

- ▶ Use the sentence frame when you need help explaining.
- ▶ Use one discussion prompt at a time and let students rehearse with a partner first.

Pause. Check. Then move on.

Step 3

Show what safe, smart, or respectful use looks like.

Show what safe, smart, or respectful use looks like.

- ▶ Give one clear example from the lesson task.
- ▶ Keep visuals on screen while students explain their thinking so language demands stay manageable.

Pause. Check. Then move on.

If You Get Stuck

1. Read the directions on your screen or slide one more time.
2. Check the example, the checklist, or your partner role.
3. Try one small change before asking for a full rescue.
4. Students may understand the idea verbally but struggle to connect it to their own choices.

Help Routine

Stop. Breathe. Point to where you are stuck. Ask a specific question.

Show Your Learning

- ▶ I stayed with the steps and used the help routine when I needed it.
- ▶ I made, coded, explained, or revised something that matches the lesson goal.
- ▶ I can point to one choice, fix, or idea I learned today.

Before You Leave

Save it, share it, explain it, or demonstrate it.

Teacher Voiceover Cues

- ▶ Today we are working on tech opens a world of communication. Watch first, then try it with me.
- ▶ If you feel stuck, stop at the checkpoint slide and use the help routine before you panic.
- ▶ Show what you learned by saving, sharing, explaining, or demonstrating one clear success move.

This slide can be removed before student use if you only want the visual deck.
