School Planning Goals and Inclusion

- What is expected: - I can decompose a problem into smaller named parts | - I can develop algorithms or programs that include repetition and conditionals for the purposes of debugging | - I can model how data is structured to transmit through a network
- What we achieved: This lesson points to local transcript or evidence files in the workspace so the packet can be revised from what actually happened in class.
- What needs improvement: stronger proof, cleaner assessment notes, and tighter lesson artifacts.
- How to improve: add transcript proof, one saved artifact, and clearer success criteria.
- Inclusion focus: use visual modeling, chunked directions, predictable routines, and flexible participation roles.
