

Chapter 1 Listen and Speak

Student project guide | Review draft for teacher selection

Your task is to teach new business owners about one marketing function. Prepare and present an explanation of its purpose, its connection to the marketing concept, and a specific example.

Choose one function with your teacher

Channel Management • Marketing Information Management • Marketing Planning • Pricing • Product and Service Management • Promotion • Selling

Your teacher will confirm whether you choose your function or receive an assigned one. Use the function names from this chapter.

What proficient work shows

Show this	Check your explanation
Purpose	What does this function do? Why does a business need it?
Marketing concept	How does it help meet customer needs and wants while supporting company goals and profits?
Example	What does a business actually do? Why is that an example of your function?
Clear explanation	Can someone follow your ideas? Explain terms your audience may not know.

Prepare in small steps

1. Plan the three content parts before designing slides. Use Chapter 1 and your course notes to check terms.
2. Build a presentation. PowerPoint is recommended; check with your teacher before using another tool. Use pictures or diagrams when they help explain the idea.
3. Rehearse once. Use the level 3 column to find a missing explanation and improve it. Present using the arrangement your teacher confirms.

Support is available. Ask about notes, a vocabulary bank, cue cards, sentence frames, rehearsal, or an approved communication support. These help you show your understanding; they do not replace it.

A 3 means proficient. A 4 shows deeper reasoning or transfer, not more slides or decoration.

Teacher confirms: work time _____ presentation date _____ length _____

Submit to _____ file name or format _____ chosen function _____

Planning and rehearsal

Student support | Use as needed; this organizer is not an extra graded assignment

Write keywords, sketch, type, or rehearse aloud. Then turn your plan into a presentation that demonstrates the same required learning.

1 Explain the purpose

The function is _____. It helps a business _____ because _____.

2 Connect the marketing concept

Customers need or want _____. This function helps by _____. That supports the company's goal of _____ and its profits because _____.

3 Give a specific example

For example, _____ does _____. This is an example of my function because _____.

Keep the vocabulary precise

Marketing concept: understand customer needs and wants and aim to meet them better than competitors; connect customer needs, company goals, and profits. Marketing mix: Product, Price, Place, and Promotion. A marketing function is a business activity, not simply another name for a P.

Need and want are distinct terms. Do not substitute "benefit" for "want." Financing is discussed within Marketing Planning in this chapter; Marketing Planning is the assigned function name.

Rehearse and check

Ask a partner or teacher: "What function did I explain? What was my example? What connection needs to be clearer?" Revise one explanation, not just its appearance.

Optional deeper thinking: What would change if the customers, costs, or setting changed? Explain why. A new situation can be discussed briefly; another slide is not required.

My next change: _____

Listen and Speak rubric

Review draft • September 25, 2026

Present one marketing function to an audience of new business owners. Explain its purpose, connect it to the marketing concept, and give an example.

Student: _____ **Function:** _____

3 is the expected proficient level. A 4 shows deeper understanding, complexity, or transfer—not extra slides, decoration, or a longer presentation.

Criterion	4 Exceeds	3 Proficient	2 Developing	1 Initial
Purpose of the function	Meets 3 and explains a meaningful connection to another function or what happens when this function is missing.	Accurately explains what the function does and why a business uses it.	Identifies part of the purpose, but an important gap or error remains. Needs prompts to explain it.	Attempts an explanation, but what the function does or why it matters remains unclear, even with guidance.
Connection to the marketing concept	Meets 3 and explains a trade-off or a new situation in which the function helps apply the marketing concept.	Explains how the function supports the marketing concept, connecting customer needs and wants with company goals and profits.	Mentions customers or business goals, but the connection to the function is incomplete or partly inaccurate.	Attempts a connection, but does not yet show how the function relates to the marketing concept, even with guidance.
Example and application	Meets 3 and independently adapts the example to a different situation, explaining why the function still applies.	Gives a specific, accurate example and explains which business action demonstrates the function.	Gives a related example, but the action or explanation does not yet clearly demonstrate the function.	Attempts an example, but it does not yet demonstrate the selected function, even with guidance.
Clear explanation	Meets 3 and independently clarifies an idea for new business owners through a helpful comparison or rephrasing.	Organizes the explanation so listeners can follow the purpose, connection, and example. Explains any unfamiliar terms used.	Listeners need repeated clarification to follow the explanation because ideas or terms are not clearly connected.	Attempts to present, but listeners cannot yet follow the explanation, even after supported clarification.

Approved access supports do not automatically limit a level. Score content accuracy in the relevant content row, not again as presentation quality. Accent, eye contact, confidence, and decoration are not scored.

Teacher selects before use: communication scored / feedback only. Overall grading guidance follows.

Teaching and access guidance

Teacher recommendations | Apply UofR learning within the SBTE's assignment

Recommended starting point: share the guide and rubric, make the three content targets visible, and let students use a small menu of supports. Keep the presentation requirement; confirm any alternate audience or recorded route with the SBTE. [W1–W5]

Use UDL throughout the activity

Design choice	How to use it without lowering the target
Engagement	Offer a familiar business or product context within the selected function. Show the agenda and checkpoints. Keep choices bounded rather than introducing many tools. [W1, W3]
Representation	Give written and spoken directions. Let students try first; then model one contrasting example if needed. Keep the course term beside its meaning. [W1, W2; S6]
Action and expression	Allow planning by sketching, typing, or talking; provide cue cards, vocabulary, and rehearsal. The student still explains purpose, concept, and example. [W1, W2, W4]
Formative assessment	Check the plan before slide design. Ask “What action proves the function?” Give one specific next step, then let the student revise. [W3, W5, W6]

Suggested sequence to select with the SBTE

Launch: explain the task and level 3, then collect a first attempt. Planning: check the three content parts; use a short model or non-example only where needed. Build and rehearse: prioritize meaning, then clarity. Present and respond: record evidence and offer one next step. [W1, W3, W5; S6]

Planning option, not a deadline: two or three work sessions and approximately 2–3 minutes per presentation. Adjust to the class size and SBTE schedule before announcing it. At 3 minutes plus a 1-minute transition, 15 presentations require 60 minutes.

Support and independence are different questions

Using approved notes, assistive communication, or a vocabulary bank is not evidence of weak understanding. Record whether the teacher supplied the reasoning, not merely whether a support was used. Do not cap a score because a student uses an access support. [W1, W2, W6]

Co-teaching option: one teacher manages the presentation routine while the other records evidence or supports access. Calibrate on two sample explanations first; do not turn engagement, compliance, or personality into extra criteria. [W1, W4]

Scaffolding for this class

Teacher audience guide | De-identified transcript evidence, not fixed ability labels

Students have generated relevant everyday examples and contributed in supported discussion. The next step is a precise explanation of why the example fits a function and how it serves customers and the business. The recordings do not establish every student's independent mastery or a uniform level across both Marketing sections.

What the record shows	Instructional response
Examples are a strength	September 23, 00:17:24–00:22:35: contributions include grocery pickup, reward points, mall navigation, and movie showtimes. Invite students to begin with their own familiar context. Do not supply their complete answer. [S6]
Connections sometimes need prompting	September 23, 00:17:58–00:18:52: a follow-up elicits how mall navigation helps customers. The teacher then expands the profit connection. Check each student's reasoning instead of treating the whole exchange as independent student mastery. [S6]
Terminology needs a precise check	September 24, 01:13:15–01:17:32: streaming, free trials, and ratings appear in the discussion, with prompts to specify product and channel. Some adult wording also blurs categories. Verify terms with the book; target market is not one of the seven functions. [S7]
Volunteers are not the whole class	September 24, 00:30:52–00:32:18: SBTE praises clearer delivery and asks for participation beyond repeated volunteers. Give everyone a brief think/write opportunity, then sample across the room. [S8]

A responsive support sequence

Start with a 60–90 second check: “Name your function. Describe one business action. Explain how it helps customers and the business.” Students can jot, sketch, or speak to you; this is planning evidence, not the final presentation. [W1–W5]

If the connection is clear: release the student to build; offer a changed-situation prompt. If the example is relevant but the connection is thin: ask one question or offer a sentence frame. If the term and action are mismatched: compare two short actions with the vocabulary bank, then ask the student to explain a different example. [W1, W3, W6]

Check again after support. Record the explanation and what prompting was needed. Fade only the support no longer needed; keep approved access supports. Do not assign fixed ability groups from a transcript.

Before submission, use a brief completion check. September 25, 00:15:24–00:15:36, includes a report of completed work shared but not finally turned in. Check the assigned destination and visible submission status; this workflow issue is not proof of weak marketing understanding. [S9]

Revision option: after specific feedback, collect a brief clarification of the same target under the SBTE's approved process. [W3–W5]

Choosing a grading method

Teacher decision aid | Recommendations, not a verified school calculation policy

The SBTE requested the school's 1–4 outcomes framework. The available school photograph defines achievement levels, but does not specify how to combine rubric rows. Teams shows Points (Default); that setting alone does not answer the question.

Recommended starting point

Record the three content outcomes separately and use the communication row for feedback. If the SBTE wants communication as a scored outcome, use all four rows. This protects content validity while still making the presentation expectations explicit. Decide and tell students before they begin. [W1, W4, W5]

Option	How it works	Trade-off
Separate outcomes Recommended if permitted	Record 1–4 for each content row. Keep communication separate, or score it as an additional outcome if agreed.	Shows exactly what needs improvement. Does not produce one overall number.
Holistic best fit	Use the row evidence to judge the overall explanation. Document why the chosen level describes the work.	Can respect the pattern of learning, but requires calibration and a rule for a missing core requirement.
Average of rows	For four equally weighted scored rows: (purpose + concept + example + communication) ÷ 4.	Simple, but assumes equal weight and numerical intervals. Strong delivery can hide a content gap. Decimal and rounding rules need approval.
Lowest core outcome	Use the lowest of the three content levels for the overall content result. Record communication separately.	Ensures every core target is met, but one weak area can dominate. Use only if explicitly chosen.

Worked comparison using the same evidence

Suppose the row levels are Purpose 3, Concept 2, Example 3, Communication 4. Separate outcomes preserve 3 / 2 / 3 and the communication 4. An equal average of all four is 3.0, which conceals the developing concept connection. Lowest core gives 2. Best fit has no automatic answer: the missing connection must be considered explicitly.

If the SBTE selects an average, record the approved rule for decimals and rounding. Do not silently convert a 1–4 result to a percentage, letter grade, or total out of 16. Do not average IE as zero.

Agreement before release: rows scored _____ method _____ decimal rule _____

Where the result is entered _____ IE handling _____ revision opportunity _____

Scoring and feedback in practice

Teacher quick-use page | Evidence first, then the level

Criterion	Level 1–4	Evidence heard or seen
Purpose		
Marketing concept		
Example and application		
Clear explanation Score or feedback only		

Approved supports used: _____

Reasoning supplied by teacher, if any: _____

Overall result, only under agreed method: _____ Method: _____

Feedback: “You showed _____. Next, explain _____ by _____.”

A brief calibration example

Teacher-created practice example using the class’s phone theme: “Pricing sets what customers pay. A phone business compares what customers want with what they can pay and the costs it must cover. A lower-cost basic model can meet a customer’s needs while supporting the company’s sales goal and leaving room for profit.”

Proficient evidence: the response explains purpose, connects customers, company goals and profit, and identifies a pricing action. Confirm that the student can explain the example rather than merely repeat a supplied script.

Possible level 4 evidence: “If component costs rise, keeping the same price reduces the margin. A simpler model might preserve an affordable option, but the business must check whether customers still want it.” The added reasoning addresses a changed situation; length alone earns nothing.

Keep scoring dependable

1. Start with level 3 and locate the required evidence.
2. Use 2 for partly accurate but incomplete understanding; use 1 for an attempt that does not yet demonstrate the target. Note the gap.
3. Use 4 for justified complexity or transfer. The rubric gives possible routes, not a mandatory extra task.
4. Locate vocabulary errors in the relevant content row. Do not penalize the same error again under communication.

Insufficient evidence is not initial understanding

The school photograph defines IE as “No task available to score.” Recommendation: keep IE in the teacher guide, outside the four achievement columns. Confirm its assignment-specific use and gradebook entry. Do not infer low mastery from an absent task, and do not treat a partial presentation as automatically IE.

Why these recommendations fit

Teacher reference | Source requirements and UofR-informed design decisions

The whole toolkit applies UofR learning to the SBTE's task. These labels identify authority, not importance: A = school/SBTE required; B = source-aligned clarification; C = UofR-informed improvement; D = optional extension.

Element	Basis and recommendation
A Assignment and scale	One function; purpose; marketing-concept connection; example; presentation; 1–4 outcomes. Keep all central. [S1–S4]
B Content criteria	The first three rubric rows map directly to the three required explanations. Precise vocabulary is evidence within each row. [S1, S5]
B/C Communication	A clear presentation is source-aligned; making it a separate scored row is a design choice. Prefer feedback-only unless the SBTE wants a distinct communication outcome. [S1, W4]
C Descriptors and supports	Observable explanations, visible success criteria, planning frames, purposeful visuals, rehearsal, and varied access routes apply UofR learning without changing the marketing targets. [W1–W6]
C Grading guidance	Separate outcomes and calibration are recommendations. None of the comparison methods is claimed to be current school policy.
D Extensions	Alternate audience or recorded presentation, an additional transfer prompt, peer feedback, and reassessment require teacher selection or approval.

UofR coursework used

W1 EDF447: Piter DI UDL ADHD Friendly Talk. Plan engagement, representation, and expression for variability; preserve common learning goals. Local and Google Drive copies read.

W2 EDE448: Module 3 Communication Support Plan. Protect student authorship, wait time, vocabulary access, and multiple communication routes. Its fictional learner profiles are not evidence about this class.

W3 EDU486: Invisible Invaders Gotta-Have Checklist Evidence Map. Align activities and explanations to explicit ideas; maintain reasoning across response modes.

W4 EDF436: Minecraft Coding FUNdamentals Lesson 1 Quick Use Rubric Notes. Separate conceptual work from interface fluency and communication; attach observation evidence to a criterion.

W5 EDU442: Classroom Implementation Materials. Use visible success criteria, small steps, planning checks, and explanation of student decisions. AI use is not imported into this assignment.

W6 ED452B: March 12 Inclusive Assessment Strategies discussion, 00:04:31–00:08:09. Supports can reveal understanding; distinguish supplied reasoning from access. Peer grading practices discussed there are not this school's policy.

School sources S1–S9 and exact coursework paths are documented in Evidence-and-Design-Notes-v2.md. This package is for Piter/Sol review, not an approved school policy.
